**ADVANCED TASER M26  
Certified For Animal Use**

To Whom it May Concern,

When we first introduced the ADVANCED TASER M26, we did not have sufficient information on it's effectiveness on animals to recommend its use on animals. Over the past several years, we have completed additional animal testing, and have received 37 field reports of the ADVANCED TASER M26 being used in field applications on animals. Of these 37 incidents, the M26 use was reported to have been successful in 34 cases, a 92% success rate.

Given the successful use of the M26 against animal targets, we are now certifying the M26 for use on animal subjects. It should be noted that the 92% success rate is not 100%, hence tactical caution and lethal force backup where appropriate should be implemented. Further, we have developed a new MX Animal TASER specifically designed for large animals. In our testing, the M26 was capable of impairing a 1,500 pound bull, but did not drop the bull to the ground. The MX Animal TASER caused complete lock-up of the animal, and complete incapacitation. Hence, the MX Animal TASER would be recommended for applications with large animals when possible, although the M26 is a viable option even on large animals.

Sincerely,

A handwritten signature in black ink, appearing to read "Rick Smith", with a horizontal line underneath.

Rick Smith  
CEO  
TASER International, Inc.

## DETAILS

**Description:**

Officers responded to a suicidal subject. Contact was made with the subject in the living room. Officers saw two boxer dogs in the residence. When contact was made with the subject he began to scream and fell to the floor. At that time the two dogs started to charge the officers. A fire extinguisher was deployed and stopped one dog. The second continued towards the officers who were holding the owner on the ground. A single Taser cartridge was deployed striking the dog on the side. A full cycle was given. The dog dropped to the ground. Upon completion of the cycle the boxer stood up and ran out of the room. He was later captured by Animal control and taken to a Vet Hospital for dart removal. Situations like this in the past have resulted in lethal force use against the K9.

## DETAILS

**Description:**

Officers responded to a vicious dog call. Dog was barking and growling at officers for 20 minutes before ARO arrived. ARO attempted to put rope around dog's neck but dog charged at officer. Officer tased dog in muzzle. Dog went down and did not move. Dog whimpered for approximately three seconds. while dog was on the ground ARO handler put rope around dog's neck. Dog got up after approximately 15 seconds and continued to bark and growl.

**DETAILS****Description:**

Officer's received a call in reference to a domestic, the calling party said that her ex-husband was at her house and refusing to leave. The calling party said that he was drunk and had assaulted her. When officer's arrived they contacted the calling party and she told them that her ex-husband had assaulted her and he was now sitting on the front porch of the house behind hers. Due to the fact that they now had information that the subject was intoxicated and had a history of violent behavior one of the officer's retrieved his M26 Taser from his scout car. The officer's then walked to the house directly behind the calling parties and as they approached the front porch they observed a man, who fit the description given by the calling party. As they approached the subject they observed that the subject had been drinking and was holding a black dog (named spook). The Spook appeared to weigh approx. 60 –70 pounds and was on a leash that the subject was holding. The officer's asked the subject to put Spook up so they could speak with him. The subject stood up from the porch and was unstable on his feet, and again appeared to be intoxicated. As the subject began walking towards his ex-wife's property he passed by the officers and Spook began growling at the officer with the M26 Taser. Spook then lunged at the officer with the Taser nearly biting him in the groin area, the officer deployed the Taser from the hip striking Spook on the right side near the abdomen. The subject was now trying to pull Spook back while the Taser was being deployed. Spook was trying to get away however, the subject reached down and grabbed Spook by the collar. Well Spook didn't like that and bit the subject, on the hand, causing him to let go of the Spook. Spook now loose ran into the back yard breaking both wires from the M26 Taser however, both probes were still imbedded in Spooks skin. Animal control was contacted and Spook was taken into custody at which time both probes were removed.

**DETAILS****Description:**

PO M. Gray was dispatched to a vicious animal complaint where the city dog warden was attempting to catch a violent pit bull that had already bit at least two people. The first officer dispatched saw that the dog warden was not able to get close to the animal without danger and called for a car with a Taser, hoping that they could incapacitate it and get the noose on it. The officers arrived and got within 10 feet of the animal, turned the Taser sideways to try and get both probes into surface area and fired. Both probes hit the animal, and it went down. The dog warden and one officer approached the pit bull and started to put the noose around its' neck when the charge emission ended. Immediately the dog started biting at the wires, jumped up lunged at the officer and dog warden but turned and ran. It broke the wired from the unit, and is still at large with the probes imbedded in it, and the wires trailing behind.

**DETAILS****Description:**

Suspect was a mental patient that was off his medication. The suspect is flagged in our computer system as violent and mentally unstable. The suspect's family was trying to have the suspect committed for mental evaluation and the suspect was refusing to be taken to the hospital by EMS. When officers arrived, the suspect was inside his backyard, surrounded by his three pit bull dogs. The backyard is surrounded by a short chain link fence. The fence and dogs prevented officers from approaching the suspect. The suspect refused to talk with officers and threw sticks at the officers, as he screamed obscenities. The suspect became extremely angry and charged towards officers in an aggressive manner with his fists clenched. As I aimed the M26 at the charging suspect, he turned to run in the opposite direction. One probe struck the suspect in the upper left arm and the other probe missed the suspect, passing behind his back. Current was applied until the suspect exceeded the 21 foot range and snapped the wire to the one probe. The suspect appeared dazed and stumbled across the backyard, where he climbed over the back fence. The suspect was dazed and slowed enough that officers were able to run around the fenced backyard and tackle the suspect shortly after he climbed over the back fence. It should be noted that the three dogs ran and hid once the Taser was deployed and the electrical current was traveling through the wires.

**Comment:** Once the suspect was secured, he repeatedly yelled "You shocked the shit out of me!"

**DETAILS****Description:**

The local livestock auction barn had a steer get loose from them. We have an agreement with the barn that runaway animals are to be shot to reduce the risk of the animals causing motor vehicle crashes that the livestock barn would be liable for. The steer ran into a housing area and was in between houses, making the use of firearms risky. In order to prevent the possibility of a shot damaging a house, the on duty Sergeant asked a patrolman to try to use the M26 to put the steer on the ground so a shot could be taken, making the ground the backstop. The M26 did put the animal on the ground. As the sergeant moved in to dispatch the steer, the 5- second cycle had ended. The steer started to get up. Patrolman attempted to apply another 5-second cycle, but the steer had rolled around on the ground and the wires were broken. The steer got to his feet and ran between houses again before sergeant could use his pistol. Although this situation did not end up with the dispatching or capture of the animal, the officers involved told me that they felt the plan they had come up with was a good one. The officers informed me that if the M26 could take a steer off it's feet, it would surely work on almost any human.

**Comment:**

**Analysis:** This incapacitation was on steer (not a human).

**Incapacitation Rating:** Dropped

**DETAILS****Description:**

Officers had been trying to catch a loose DEER from a high traffic business district in town for about one hour. Wildlife officers had tried to use sedative darts and this did not work. After a long foot chase we found the deer in a back loading area of an antique store, lying beside several thousand dollars worth of glass cabinets and tables. I was able to fire the M26 at the deer and only got one probe in the deer. This caused the deer to react by shaking and moaning but did not go to the ground. Because of this distraction we were able to then catch the deer with parachute material that Wildlife Officer use. The M26 was beneficial in that it provided the distraction to catch the deer without the deer harming itself and without breaking any glass.

**DETAILS****Description:**

I don't know if you are tracking animal usage: The victim was an extremely aggressive Pitbull. The dog was hit by 2 probes from first TASER. The rear quarters were effectively immobilized, but the dog was able to run using it's front legs. Probes struck near the rib cage and rear of the dog. The dog was able to go beyond the 21 feet of wire despite the officer running after the animal, thus severing the connection. A second cartridge was fired from a second TASER with one probe penetrating and the second missing, but there was some effect on the animal. Eventually a tranquilizer was used to contain the animal. The TASER had some effect by reducing the aggressiveness towards the officers, and by partially immobilizing the animal

**DETAILS****Description:**

This is another incident where the M26 was used on a vicious dog. The officer responded with Humane Officers regarding two vicious Rottwieller dogs. While the Humane Officer was taking one of the dogs the second tried to attack. The M26 was deployed at the dog and the darts struck the attacking dog. The dog did not fall to the ground but instead ran away from the officers. The dog broke the wires and was never located again. The M26 may not have knocked the dog to the ground, but it was still successful as it stopped the attacking dog and prevented injuries.

## **DETAILS**

**Description:**

Officer received a call of a vicious dog. Upon arrival the Officer found the dog in the front of a residence. When the officer tried to approach the house, the dog charged at him. The Officer shot the dog with the taser. The dog collapsed immediately but kept trying to bite the Officer after the 5 second tase was over. The Officer tased the dog approximately 7-8 times.

**DETAILS****Description:**

In November of 2002, members of the Le Sueur County Drug Task force, went to a residence in the County, to serve a search warrant for narcotics. After knocking and announcing, no one responded. We had been warned that a extremely mean dog was inside the home. Officers entered the front door and a 80 pound animal with teeth showing, came charging towards us. Sgt. Dave Struckman, using his M26 Taser made a quick shot and struck the dog in the face . The dog dropped. He was then removed from the room where as officers could safely search the home which did contain three suspects. The search would have been hampered if not for the use of the M26 Taser. Using lethal force on the animal would have been very dangerous. Using the M26 dropped the animal and did no permanent injury to him. One of the suspects told us the animal is protection trained. He advised, he was the only one who could take care of the dog. He was the one to remove it and lock it into the porch and received a deep bite for his efforts. Probes were eventually removed by a friend of the owner, and the dog suffered no ill effects from the event.

As you can see by the probes the dog was very close to the officers. I think this shows the confidence we have in your product and how close the dog was.

**DETAILS****Description:**

Officers called to residence where Bull Mastiff dog had gone into seizures and was trying to attack family. Family had locked themselves in upstairs bedroom and called police. Upon arrival, ofc. found dog on top of dining room table growling and showing teeth. Cartridge was fired from taser. One probe stuck in dogs hind leg and the other in his chest. He was given the full 5-second burst. Officers then tried to tape the dogs mouth shut with duct tape. This was unsuccessful due to dogs instant recovery after shock stopped. Officer repeatedly gave dog 5-second burst while officers tried to accomplish muzzling of the dog. After 10 5-second applications officers were finally able to get dog muzzled. Dog was trying to bite officers during all of this. Once muzzled, the dog died of unknown causes.

**DETAILS****Description:**

I'm an M26 Taser instructor for my department and we have just recently been issued 80 M26 Tasers for patrol use. I had been dispatched to a call involving two aggressive dogs that were actively aggressing people in a residential area. The dogs had not actually attacked anyone at the time of the call. I located the dogs in a front yard of a residence. One was a 50-60 lb. pitbull and the other was a rottweiler that weighted approx. 120lb. I decided to arm myself with the M26 as I had two assist officers with lethal (shotgun, handgun). I was in the street about 25 yards from both dogs when the pitbull charged. As he got closer he started to slow down and began to bark but kept a distance of 5-6 feet. He then started to walk back to the driveway when I noticed the rottweiler charging down the driveway at full speed. As he got within several feet I realized he was not slowing and appeared intent on attacking so I deployed the M26. It was a point and shoot situation. The top dart struck him directly between the eyes and the second hit him on the right side. He was immediately incapacitated as the Taser caused electro-muscular disruption. Before I realized it he was on his side twitching. Our department policy is that when a Taser is deployed the suspect, or in this case, dog, gets a full 5 second automatic timing cycle (ATC) which is what he got. He didn't howl or yelp but just quietly took it despite the obvious violent muscle contractions. After the ATC he just stayed on his side and appeared to be having further muscle spasms and this continued for approx. 20 seconds. He then sat up and then stood up. It took a few seconds to get his coordination back so he looked as if he were severely intoxicated as he tried to run away. Within a few yards he was at full stride with the pitbull hot on his heels. I removed the spent cartridge. The dogs tried to run past us so I activated the Taser in the stun mode hoping the noise alone would turn them around and it did. They immediately retreated back to the house. The rottweiler had a completely different attitude as did the pitbull. Both were very scared and tried to hide any place they could. Ultimately the owners of both dogs were cited for Vicious Dog At Large and took possession of the animals. The Taser provided a much better alternative to lethal force and the risk of rounds bouncing all over and the obvious mess that would follow. The neighbors were very impressed with the Taser and thanked us over and over. The dog's owners also thanked me and said they would have understood if we had used lethal force but were glad we didn't. A roommate to the rottweiler's owner easily pulled both probes out. This was my departments first Taser deployment.

**DETAILS****Description:**

While coming in service from a disturbance call at a local apartment complex, my partner and i heard a loud commotion around the corner. As we rounded the corner, we observed a cow running down the street with four animal control officers chasing it. The cow had gotten out of it's pen about two miles away and had been running down public roadways evading animal control officers. I got into my unit and drove down the block, where the cow had ran into a fenced backyard of a residence. Animal control officers tried numerous times to tackle, rope and gain control of the animal to no avail. It was apparent that the officers were tired and an injury was imminent. The cow then changed direction and began to run directly at me. I deployed my M26 into the cow's rear hips, each probe striking on either side of the cow's rear. The cow immediately stopped and attempted to take another step before falling to the ground. I delivered two five second cycles to the cow, allowing enough time for animal control officers to safely approach and rope the cow. The cow was then escorted to a trailer where the probes were removed. The cow was in good condition aside from being hot and tired. The animal control officers on scene were grateful and swear they are going to ask their supervisor for a M26 for Christmas.

**DETAILS****Description:**

I was dispatched to a car vs cow accident without injuries. Upon arrival found that the car had struck two cows. One joined back with the group and they went back to field. One cow had an injured leg and was unable to join herd. While completing report we attempted to contact cow owner. Owner could not be contacted so County Vet was requested. When Vet arrived we discussed two options. Option #1 was to destroy the animal. Option #2 was to restrain the cow to the fence line so that it would not return to the roadway and cause another accident. Vet also advised that if the cow was alive it still had some market value to the owner. We decided to attempt the taser on the cow. The cow weighed approximately 1,500 pounds. I shot the cow from somewhere between 10 and 15 feet. One dart struck the cow in the left front shoulder. The other dart hit about 18 inches lower in the upper portion of the front leg. The cow dropped promptly upon deployment of the taser. After the first 5 second discharge the cow was ready to get right back up, however the vet did not have the cow restrained completely so I gave it a second discharge. After the second discharge the cow layed on the ground for a couple of minutes. Recovery took about 3 minutes after the second discharge. The cow did get back on its feet and was alert and active enough that it would not allow us to get close enough to it to remove the darts. Using the taser in this situation allowed us to control this animal in a manner that did not cause further injury to the animal or further risk to the public by causing another accident.

**DETAILS****Description:**

Officer responded on vicious dogs (Pit Bull) loose in a neighborhood. When officer arrived the dogs chased him and he had to jump in his car for safety. Officer eventually got back out and one of the dogs again started chasing him. Officer deployed his M-26 at a distance of about 4 feet. The dog was facing him head on. The top probe struck the dog in the head. The other missed but got entangled in the dog's feet, providing a successful deployment at that point. The dog dropped and ran off into bushes when the cycle stopped. The other dog ran with it and neither one would come out, even after the owner arrived.

**DETAILS****Description:**

Initial call was to backup a deputy at an eviction. The evictee was known to be mentally ill, a diagnosed schizophrenic, and had reportedly stated that she would not leave the premises. We forced entry with the landlord's permission. The evictee was not present, but there were five pitbulls. Animal Control was able to remove four dogs without incident. The fifth had managed to hide in a bathroom in an enclosed area under a porcelain bathtub. Efforts to coax him out proved unsuccessful as did pepper spray. Eventually he showed himself but would only come so far. I used the tazer, striking the dog with one probe. He yelped loudly but scooted back under the tub. Two more five second blasts were applied. He yelped but did not come out. We ended up knocking a hole in the wall from the other side. The dog exited as was snared by Animal Control.

**DETAILS****Description:**

Officers summoned for an aggressive dog near a supermarket. After corraling the dog in a chained off parking lot, Animal Control officers attempted to restrain 200 pound Mastiff dog using nooses and nets. Both were ineffective as dog chewed and broke through both restraints. After the dog bit a citizen attempting to assist officers, the Taser was deployed. Both darts made successful contact in the upper/lower side/chest regions. The Taser was deployed for a full 5 second cycle, causing a momentary lack of movement. Following the Taser discharge the dog ran, breaking the Taser wires. Lacking further means of control, an officer dispatched the dog using his sidearm.
